

Senior Dental Care

Senior dental care is not a recognized dental specialty. However, senior patients need special consideration when planning treatment for dental needs.

Our office staff has many years of experience and additional training to meet the special needs of senior dental patients. This includes special consideration of health issues that may affect dental treatment, effects of multiple drug therapies to dental health, continuing consultations with patient's medical doctors, and facilities that easily accommodate wheel chairs and other patients with limited mobility.

If you are a senior patient or have a loved one that needs senior dental care, Dr. Bodie will meet with you for a free consultation regarding your needs.

Also, ask about our senior discount!
